

```
PUT /latest/api/token HTTP/1.1
Host: 169.254.169.254
Accept-Encoding: identity
x-aws-ec2-metadata-token-ttl-seconds: 21600
User-Agent: aws-cli/2.0.36 Python/3.7.4 Darwin/19.6.0 exe/x86_64 command/s3.ls
Content-Length: 0
```

Details

It's never that easy, unless... maybe..

- Make in unreproducible
 - Only run occasionally for exactly one call
- Target every client in the subnet at the same time
 - Just how link-local addresses work
- **Filter by API call**
 - **Fix merged day after reported (github.com/boto/botocore/pull/2237)**

Fake EC2 IMDS
